Professional Summary

Software Analyst at Capgemini with a technical background in backend development, .NET microservices, Python, and Generative AI. Experienced in developing REST APIs, Retrieval-Augmented Generation (RAG) applications, and LangGraph-based multi-agent systems. Knowledge of agent orchestration, semantic search, vector databases, context management, and AI evaluation. Focused on building scalable backend services and practical AI-powered applications.

Professional Experience

Capgemini *Bengaluru, India*
Software Analyst *July 2026 – Present*

- Joined Capgemini as a full-time Software Analyst on July 27, 2026, after completing the company training program in May 2026.

Technical Skills

Languages	Python, C#, JavaScript, TypeScript
GenAI & RAG	Prompt Engineering, RAG, Embeddings, Semantic Search, Context Management, Grounded Responses
Agentic AI	LangChain, LangGraph, Multi-Agent Systems, State Management, Agent Routing, Workflow Orchestration
Vector Databases	ChromaDB, Vector Search, Similarity Retrieval
Backend	FastAPI, ASP.NET Core, REST APIs, SQLAlchemy, .NET 8
AI Engineering	LangSmith, Tracing, Evaluation, Guardrails, Context Engineering
Microservices	RabbitMQ, Redis, API Gateway, JWT Authentication, Event-Driven Architecture
Frontend	Angular, TypeScript, Signals, RxJS
Databases	SQL Server, SQLite, Redis
Tools	Git, GitHub, Postman, Docker, VS Code, Visual Studio

Projects

E-Commerce Multi-Agent AI Shopping Copilot
Python, LangGraph, Multi-Agent Systems, RAG

- Built a LangGraph-based multi-agent platform with specialized shopping and customer support agents.
- Implemented agent orchestration, state management, context passing, memory, and intent-based routing to coordinate multi-step shopping workflows.
- Integrated RAG-based grounding and validation to support context-aware responses and improve answer reliability.

Enterprise Banking Policy & Compliance RAG Platform
Python, FastAPI, Angular, ChromaDB, RAG

- Developed a RAG platform for retrieving relevant information from banking policy and compliance documents.
- Implemented document chunking, embeddings, semantic search, and vector similarity retrieval using ChromaDB.
- Implemented multilingual retrieval and citation-based responses to help users locate relevant source information.

ConnectSphere – Microservices Social Media Platform
C#, .NET 8, Angular, RabbitMQ, Redis, Docker

- Developed a distributed social media application using .NET microservices and a YARP API Gateway.
- Implemented JWT authentication, asynchronous communication using RabbitMQ, and Redis caching.
- Built an Angular frontend using TypeScript, Signals, and RxJS, with Docker Compose for containerized services.

Education

B.Tech in Computer Science & Engineering Aug 2022 – May 2026
GLA University, Mathura, Uttar Pradesh
CPI: 7.96

Certifications

- Claude Certified Developer – Foundations (Anthropic)
- GitHub Certified: Agentic AI Developer (Microsoft)

Achievements

- Solved 100+ DSA problems across LeetCode, GeeksforGeeks, and CodeChef.
